

Natural product, ecological manufacturing methods

Empreinte specialises in producing tourist signage in enameled lava stone and extruded stoneware.

- **Natural raw materials** : lava stone used by Empreinte comes directly from quarries located in Volvic, on the slopes of former volcanoes in the Massif Central region of France. No pre-use transformation or preparatory chemical process is required.
- **Peerless resistance** : signage in enameled lava stone or stoneware is maintenance-free and features staying power for decades.
- **100% recyclable** : lava and stoneware are mineral products that are practically inexhaustible natural resources, extracted near the place of production.
- **Minimum fossil energy requirements** : quarry stones are decorated directly in our workshops.
- **No toxic emanation** : enameled lava stone and stoneware are safe products which do not give off any harmful substances.

Situated between the Atlantic and the Mediterranean, at the foot of the French Pyrenees, Empreinte combines **state-of-the-art imaging technologies** and **the traditional skills** of highly qualified craftsmen and women. Each item produced by our workshops is a one-off piece.
